miRNA Regulatory Networks

Doug Brutlag

Professor Emeritus

Biochemistry & Medicine (by courtesy)

Gene Regulatory Mechanisms

- Transcriptional Mechanisms
 - Type of promoters & RNA polymerase
 - Control of Transcription
 - Constitutive
 - Inducible
 - Repressible
 - Transcription Factors and TFBS
- Translational Mechanisms
 - Micro RNAs (miRNAs and RITS complexes)
 - Translational control
 - mRNA degradation
 - Promoter activation
 - Silencer RNAs (siRNAs & RISC complexes) degrading mRNA
- Epigenetic Mechanisms
 - Chromatin remodeling
 - Histone modifications (acetylation, phosphorylation, methylation ...)
 - DNA methylation

Mechanisms of Translational Regulation by miRNP Complexes

miRNAs Inhibit Translation by Inducing Ribosome Drop-Off

miRNA Expression Results in Temporal and Spatial Reciprocity with Target Expression

a Temporal reciprocity

b Spatial reciprocity

Genomic Organization of miRNA Genes

(a) Independent promoter

(b) Intronic

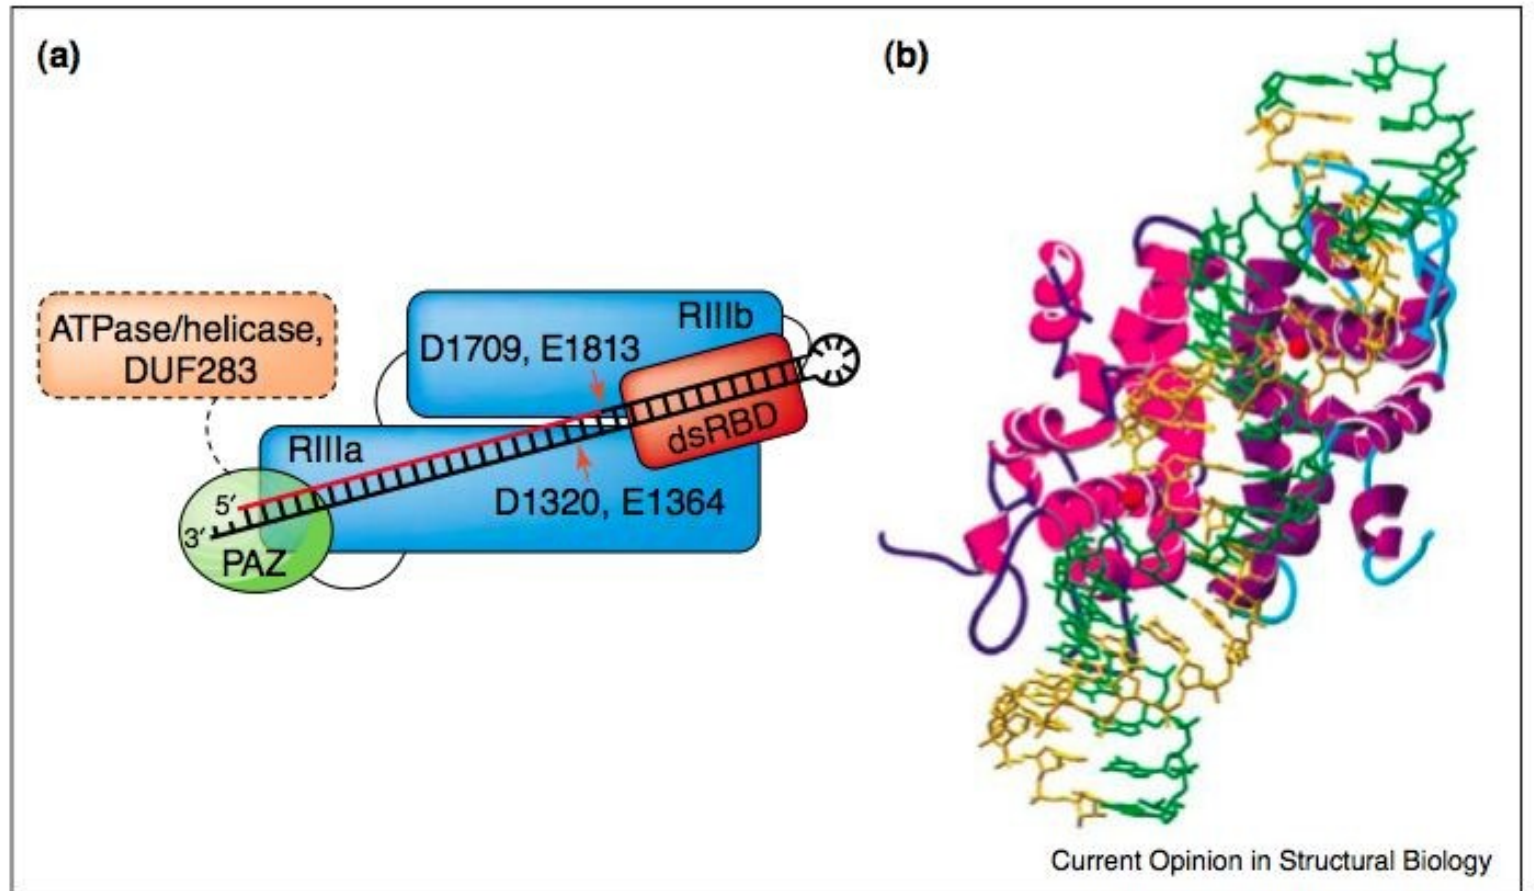

(c) Exonic

- Intronic miRNAs often in antisense direction, made from own promoter

- Exonic miRNAs - non-coding (or in alternatively spliced exons)

News - release 14

The miRBase database has moved to a new location at <http://www.mirbase.org/>, hosted in the [Faculty of Life Sciences, University of Manchester](#). All pre-existing URLs should forward to their new locations. Please update your links, and note the new contact email address (mirbase@manchester.ac.uk).

With release 14, the miRBase sequence database has broken through the 10000 entries barrier!

miRNA count: 10883 entries

Release 14: Sept 2009

Search by miRNA name or keyword

Download published miRNA data

[Download page](#) | [FTP site](#)

This site is featured in:

[NetWatch - Science 303:1741 \(2004\)](#)

[Highlights, Web watch - Nature Reviews Genetics 5:244 \(2004\)](#)

miRBase: the microRNA database

miRBase provides the following services:

- The [miRBase database](#) is a searchable database of published miRNA sequences and annotation. Each entry in the miRBase Sequence database represents a predicted hairpin portion of a miRNA transcript (termed mir in the database), with information on the location and sequence of the mature miRNA sequence (termed miR). Both hairpin and mature sequences are available for [searching](#) and [browsing](#), and entries can also be retrieved by name, keyword, references and annotation. All sequence and annotation data are also [available for download](#).
- The [miRBase Registry](#) provides miRNA gene hunters with unique names for novel miRNA genes prior to publication of results. Visit the [help pages](#) for more information about the naming service.
- The miRBase Targets database and pipeline has been rebranded as [microCosm, and is now hosted at the EBI](#). The microCosm resource continues to be maintained by the [Enright group](#). miRBase currently links miRNAs to targets predicted by microCosm, [TargetScan](#) and [Pictar](#), and aims to provide a more extensive target prediction aggregation service in the future.

To receive email notification of data updates and feature changes please subscribe to the [miRBase announcements mailing list](#). Any queries about the website or naming service should be directed at mirbase@manchester.ac.uk.

miRBase is hosted and maintained in the [Faculty of Life Sciences](#) at the [University of Manchester](#) with funding from the [BBSRC](#), and was previously hosted and supported by the [Wellcome Trust Sanger Institute](#).

miRviewer

miRviewer presents a global view of homologous miRNA genes in many species. miRviewer exhibits a comprehensive set of miRNA genes both from [miRbase](#) and candidate homologs identified using [miRNAMiner](#). miRviewer table shows conservation of miRNA genes, grouped by name, in addition to other information (see [Help](#)).

The table shows conservation of miRNA genes, grouped by name. Click on group name to see conservation for each miRNA and genomic location. Point cursor on miRNA to see summary of origin information. Symbols · indicate miRNAs present in [miRbase](#) (other miRNAs are newly discovered by [miRNAMiner](#).) Blank box indicates that the miRNA was not identified in this genome, under stringent parameters. Zoom out to see the full table by pressing Ctrl- (or Mac-) a few times.

Initial loading of table might take a few moments (for best performance use [Firefox](#)).
For questions, comments and credits see contact information at the bottom of page.

Human miRNAs (February 22, 2010)

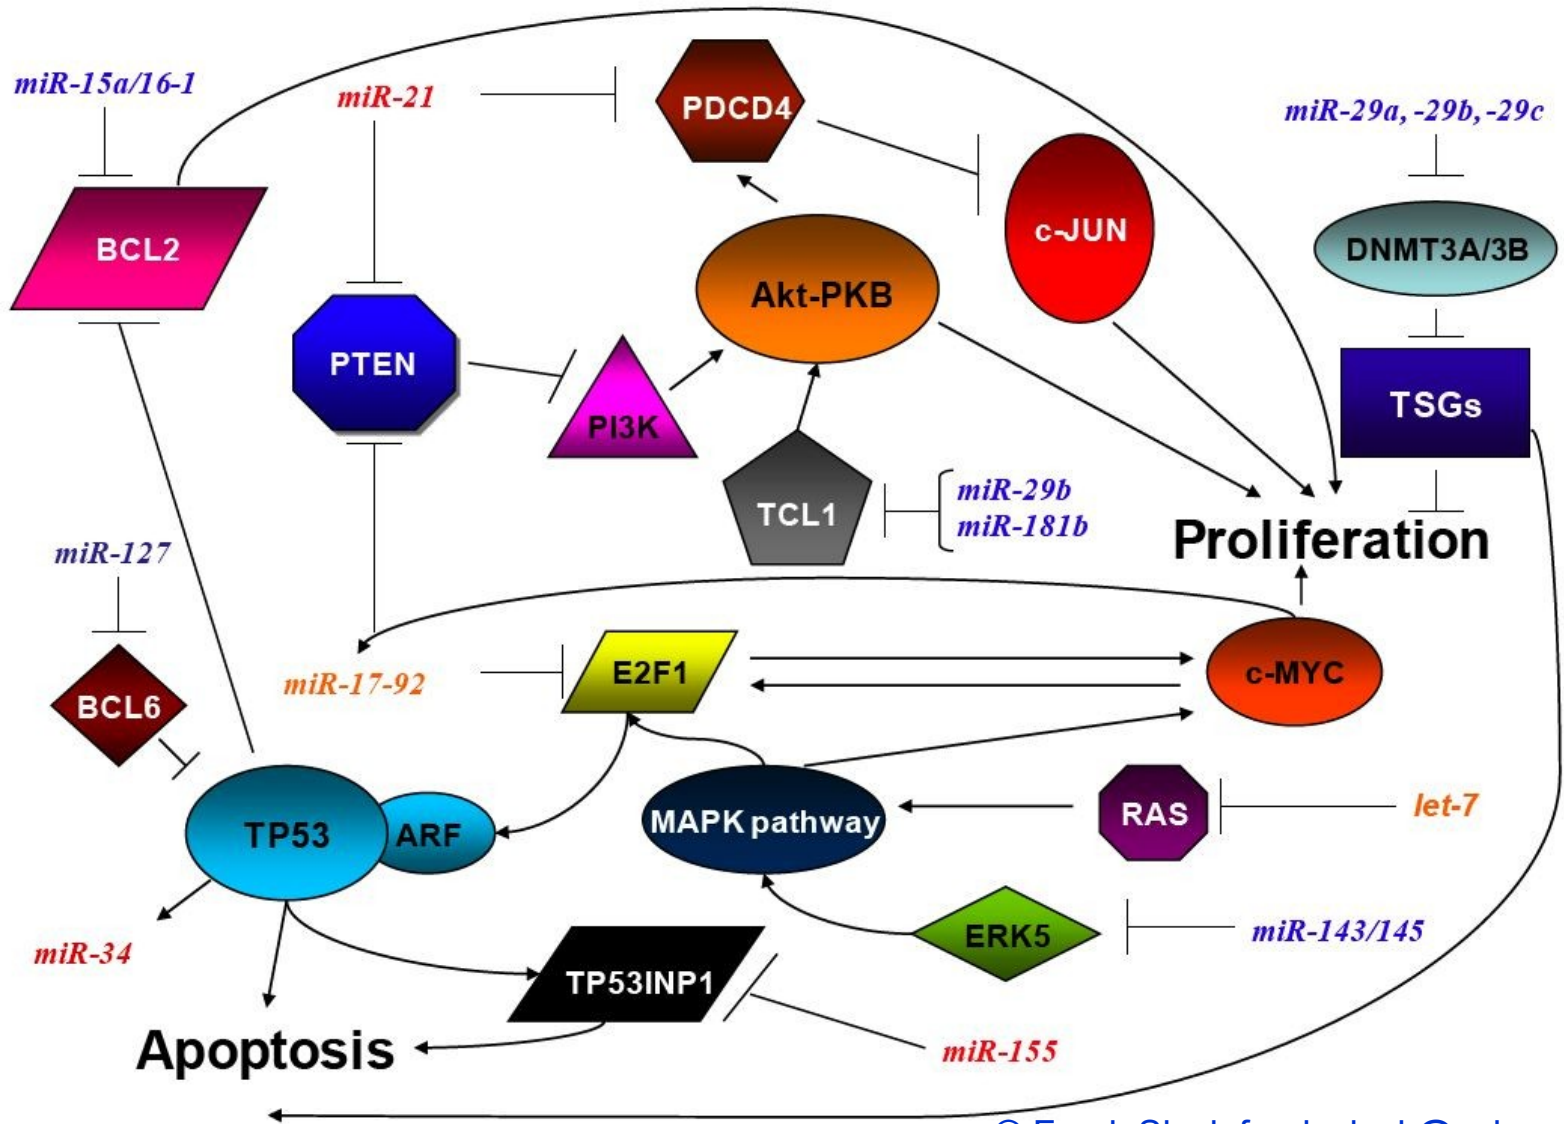

- Total miRNA genes in 115 species 10,882
- Total number of miRNAs known 1,580
- Number human miRNAs identified 851
- Number of human mRNA targets 34,788

- miRNAs can have multiple targets
- Target mRNAs can have multiple miRNA binding sites

Thousands of microRNAs act in multiple biological events

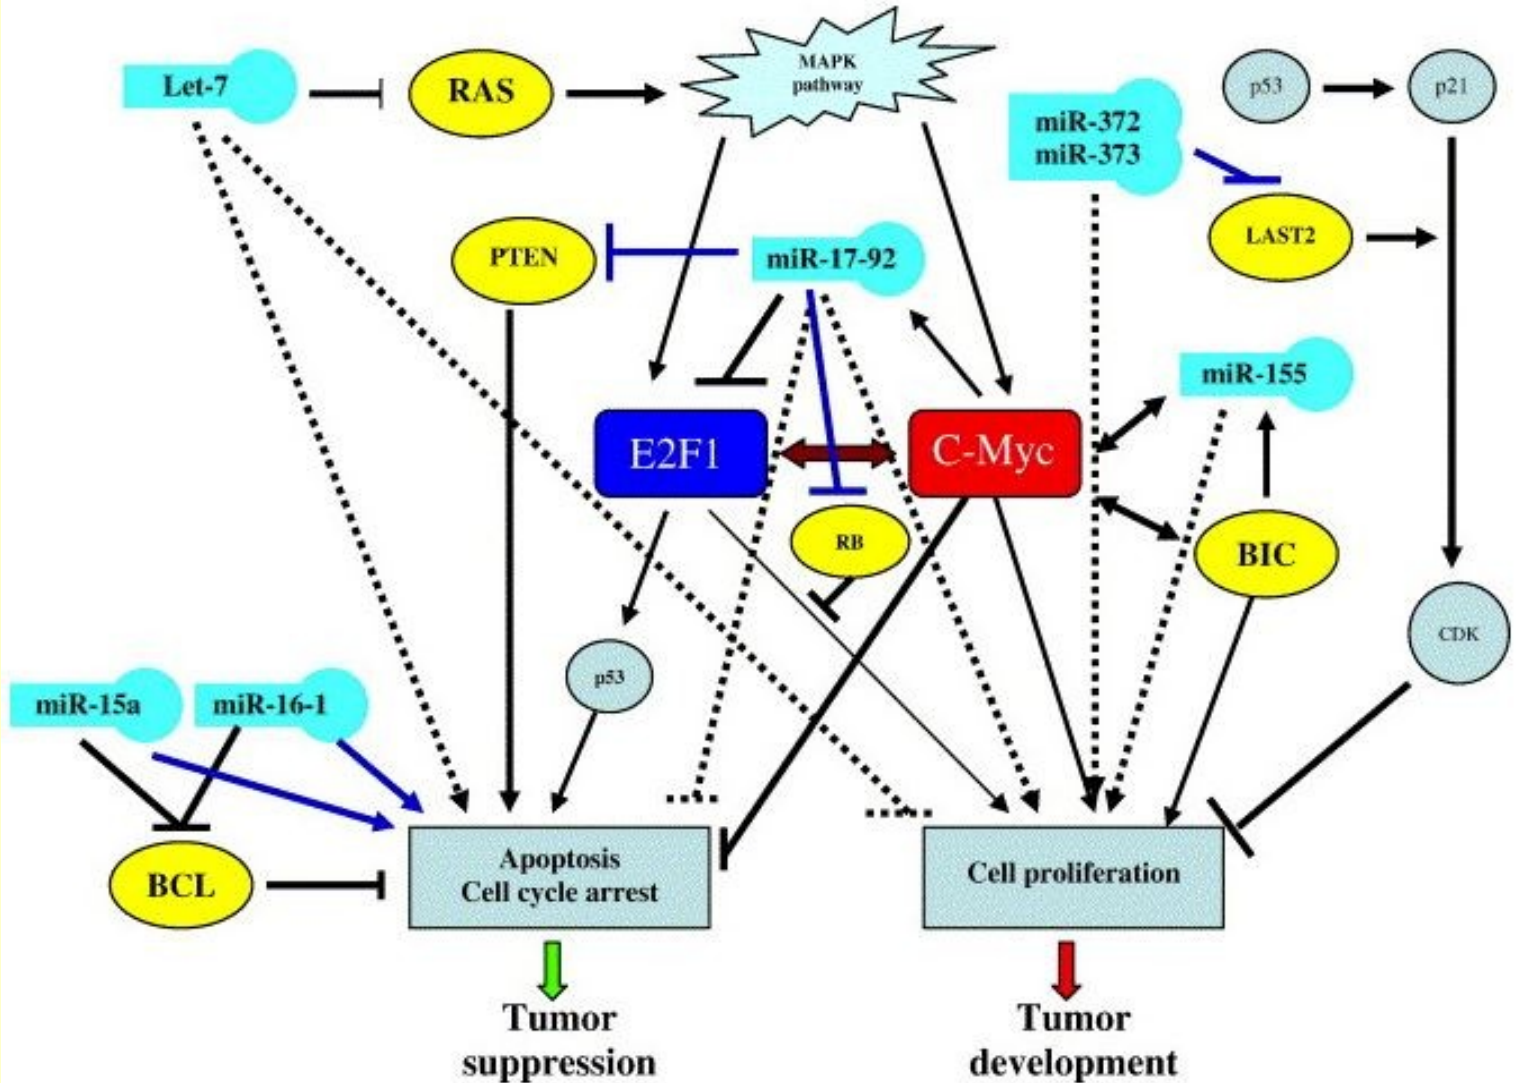

Micro RNAs Regulate Cell Growth and Death

miRNAs as Oncogenes and Tumor Suppressors

Zhang et al Dev Biol. 2007 Feb 1;302(1):1-12

***ALTERATIONS OF MICRORNAS ARE FOUND IN EVERY
TYPE OF HUMAN CANCER***

(Calin et al, PNAS 2002; Lu et al, Nature, 2005; Volinia & Calin et al, PNAS 2006; Landgraf et al, Cell 2007)

miRNAs Involved in Human Cancer

(Croce Nat Rev Genet. 2009 Oct;10(10):704-14.)

Figure 1 | MicroRNA genes map to chromosomal regions that are involved in alterations in human cancer.

miRNA Oncogenes or Tumor Suppressor Genes

Table 1 | MicroRNAs that function as oncogenes or tumour suppressor genes in human cancers

| MicroRNA | Dysregulation | Function | Validated targets | Oncogene (ONC) or tumour suppressor (TS) | Refs |
|--|--|---|-------------------------------------|--|--------------------|
| <i>miR-15a</i> and <i>miR-16-1</i> | Loss in CLL, prostate cancer and multiple myeloma | Induces apoptosis and inhibits tumorigenesis | BCL2, WT1, RAB9B and MAGE83 | TS | 15,20,23, 30,52,69 |
| <i>let-7 (a, b, c, d, e, f, g and i)</i> | Loss in lung and breast cancer and in various solid and haematopoietic malignancies | Induces apoptosis and inhibits tumorigenesis | RAS, MYC and HMGA2 | TS | 22,26, 42,70 |
| <i>miR-29 (a, b and c)</i> | Loss in aggressive CLL, AML (11q23), MDS lung and breast cancers and cholangiocarcinoma | Induces apoptosis and inhibits tumorigenicity. Reactivates silenced tumour suppressor genes | TCL1, MCL1 and DNMTs | TS | 30,64, 71,72 |
| <i>miR-34</i> | Loss in pancreatic, colon, breast and liver cancers | Induces apoptosis | CDK4, CDK6, cyclin E2, EZF3 and MET | TS | 56–58 |
| <i>miR-145</i> | Loss in breast cancer | Inhibits proliferation and induces apoptosis of breast cancer cells | ERG | TS | 31 |
| <i>miR-221</i> and <i>miR-222</i> | Loss in erythroblastic leukaemia | Inhibits proliferation in erythroblasts | KIT | TS | 30 |
| <i>miR-221</i> and <i>miR-222</i> | Overexpression in aggressive CLL, thyroid carcinoma and hepatocellular carcinoma | Promotes cell proliferation and inhibits apoptosis in various solid malignancies | p27, p57, PTEN and TIMP3 | ONC | 43,51,73 |
| <i>miR-155</i> | Upregulated in aggressive CLL, Burkitt's lymphoma and lung, breast and colon cancers | Induces cell proliferation and leukaemia or lymphoma in mice | MAF and SHIP1 | ONC | 32–34, 36,37 |
| <i>miR-17–92</i> cluster | Upregulated in lymphomas and in breast, lung, colon, stomach and pancreatic cancers | Induces proliferation | E2F1, BIM and PTEN | ONC | 19,34,35, 40,41 |
| <i>miR-21</i> | Upregulated in glioblastomas, AML (11q23), aggressive CLL and breast, colon, pancreatic, lung, prostate, liver and stomach cancers | Inhibits apoptosis and increases tumorigenicity | PTEN, PDCD4, TPM1 and TIMP3 | ONC | 31,37–39, 44–50 |
| <i>miR-372</i> and <i>miR-373</i> | Upregulated in testicular tumours | Promotes tumorigenicity in cooperation with RAS | LATS2 | ONC | 74 |

AML, acute myeloid leukaemia; BCL2, B cell leukaemia/lymphoma 2; BIM, Bcl2-interacting mediator of cell death; CLL, chronic lymphocytic leukaemia; DNMT, DNA methyltransferase; HMGA2, high mobility group AT-hook 2; LATS2, large tumour suppressor homologue 2; MCL1, myeloid cell leukaemia sequence 1; MDS, myelodysplastic syndrome; PDCD4, programmed cell death 4; PTEN, phosphatase and tensin homologue; SHIP1, SH2 domain-containing inositol-5'-phosphatase 1; TCL1, T cell lymphoma breakpoint 1; TIMP3, tissue inhibitor of metalloproteinases 3; TPM1, tropomyosin 1; WT1, Wilms tumour 1.

Table 2 | **Consequences of miRNA Dysregulation in Human Cancers**
 (Croce Nat Rev Genet. 2009 Oct;10(10):704-14.)

| MicroRNA dysregulation | Targets | Consequences |
|-------------------------|------------------------|---|
| MicroRNA overexpression | Tumour suppressors | Downregulation of tumour suppressors — for example, PTEN, p22, p57, TIMP3 and PDCD4 |
| MicroRNA loss | Oncogenes | Upregulation of oncogenes — for example, BCL2, MCL1, RAS, HMGA2, MYC and MET |
| MicroRNA loss | DNA methyltransferases | Downregulation of tumour suppressors — for example, p16, FHIT and WWOX |
| MicroRNA loss | Chromatin silencers | Downregulation of tumour suppressors |

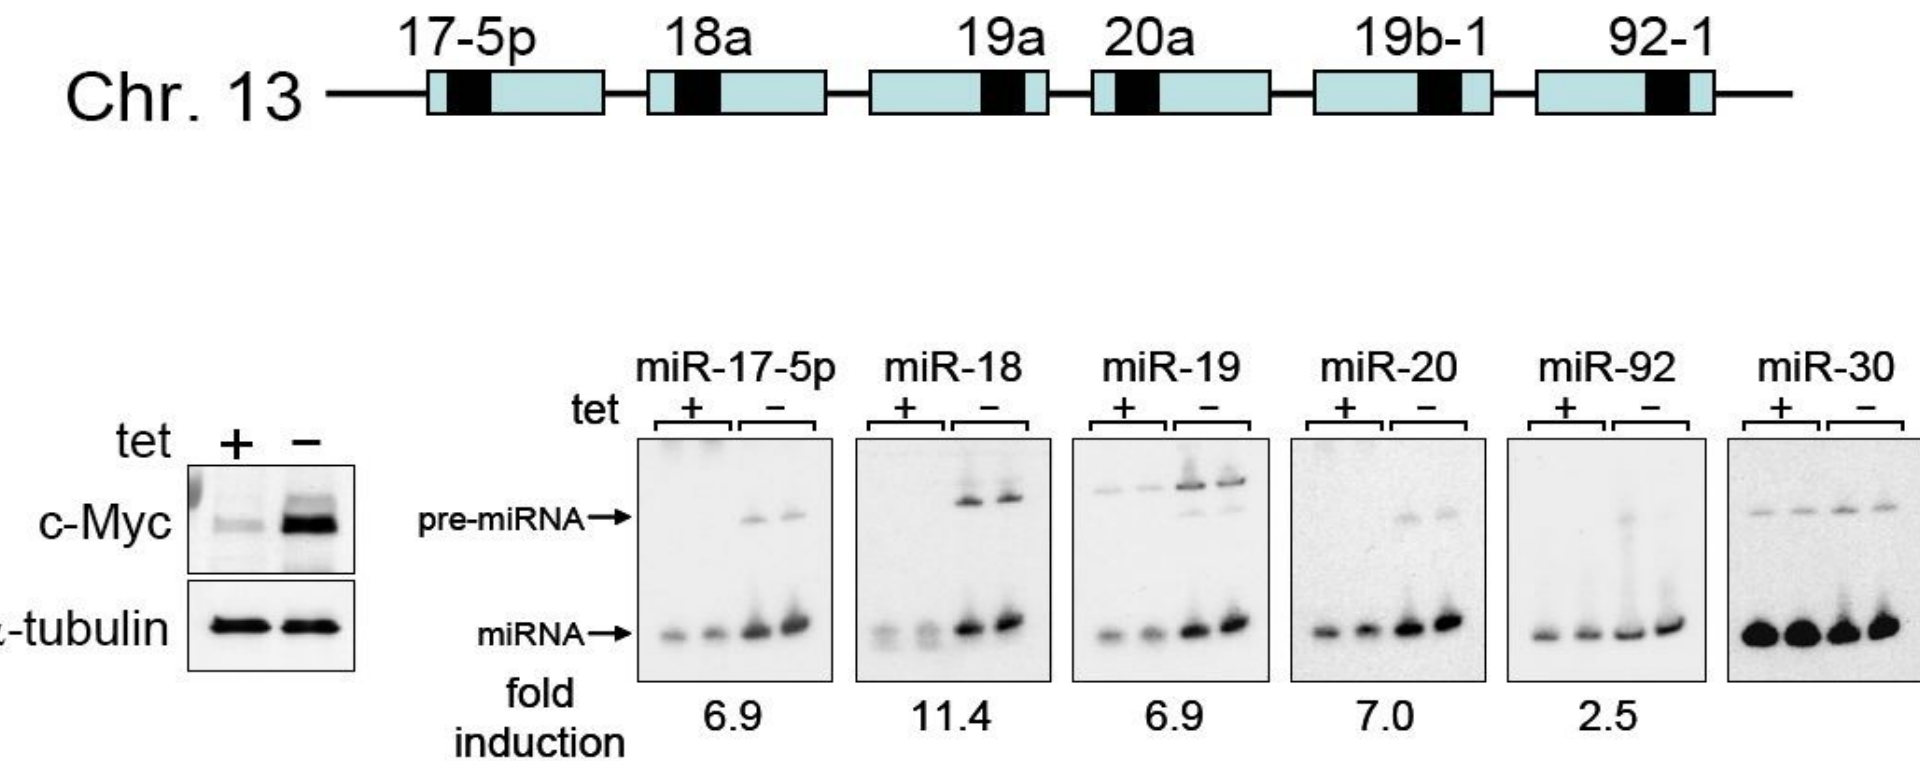

BCL2, B cell leukaemia/lymphoma 2; FHIT, fragile histidine triad protein; HMGA2, high mobility group AT-hook 2; MCL1, myeloid cell leukaemia sequence 1; PDCD4, programmed cell death 4; PTEN, phosphatase and tensin homologue; TIMP3, tissue inhibitor of metalloproteinases 3; WWOX, WW domain-containing oxidoreductase.

cMyc & miRNAs Regulate E2F1 Cell Cycle TF

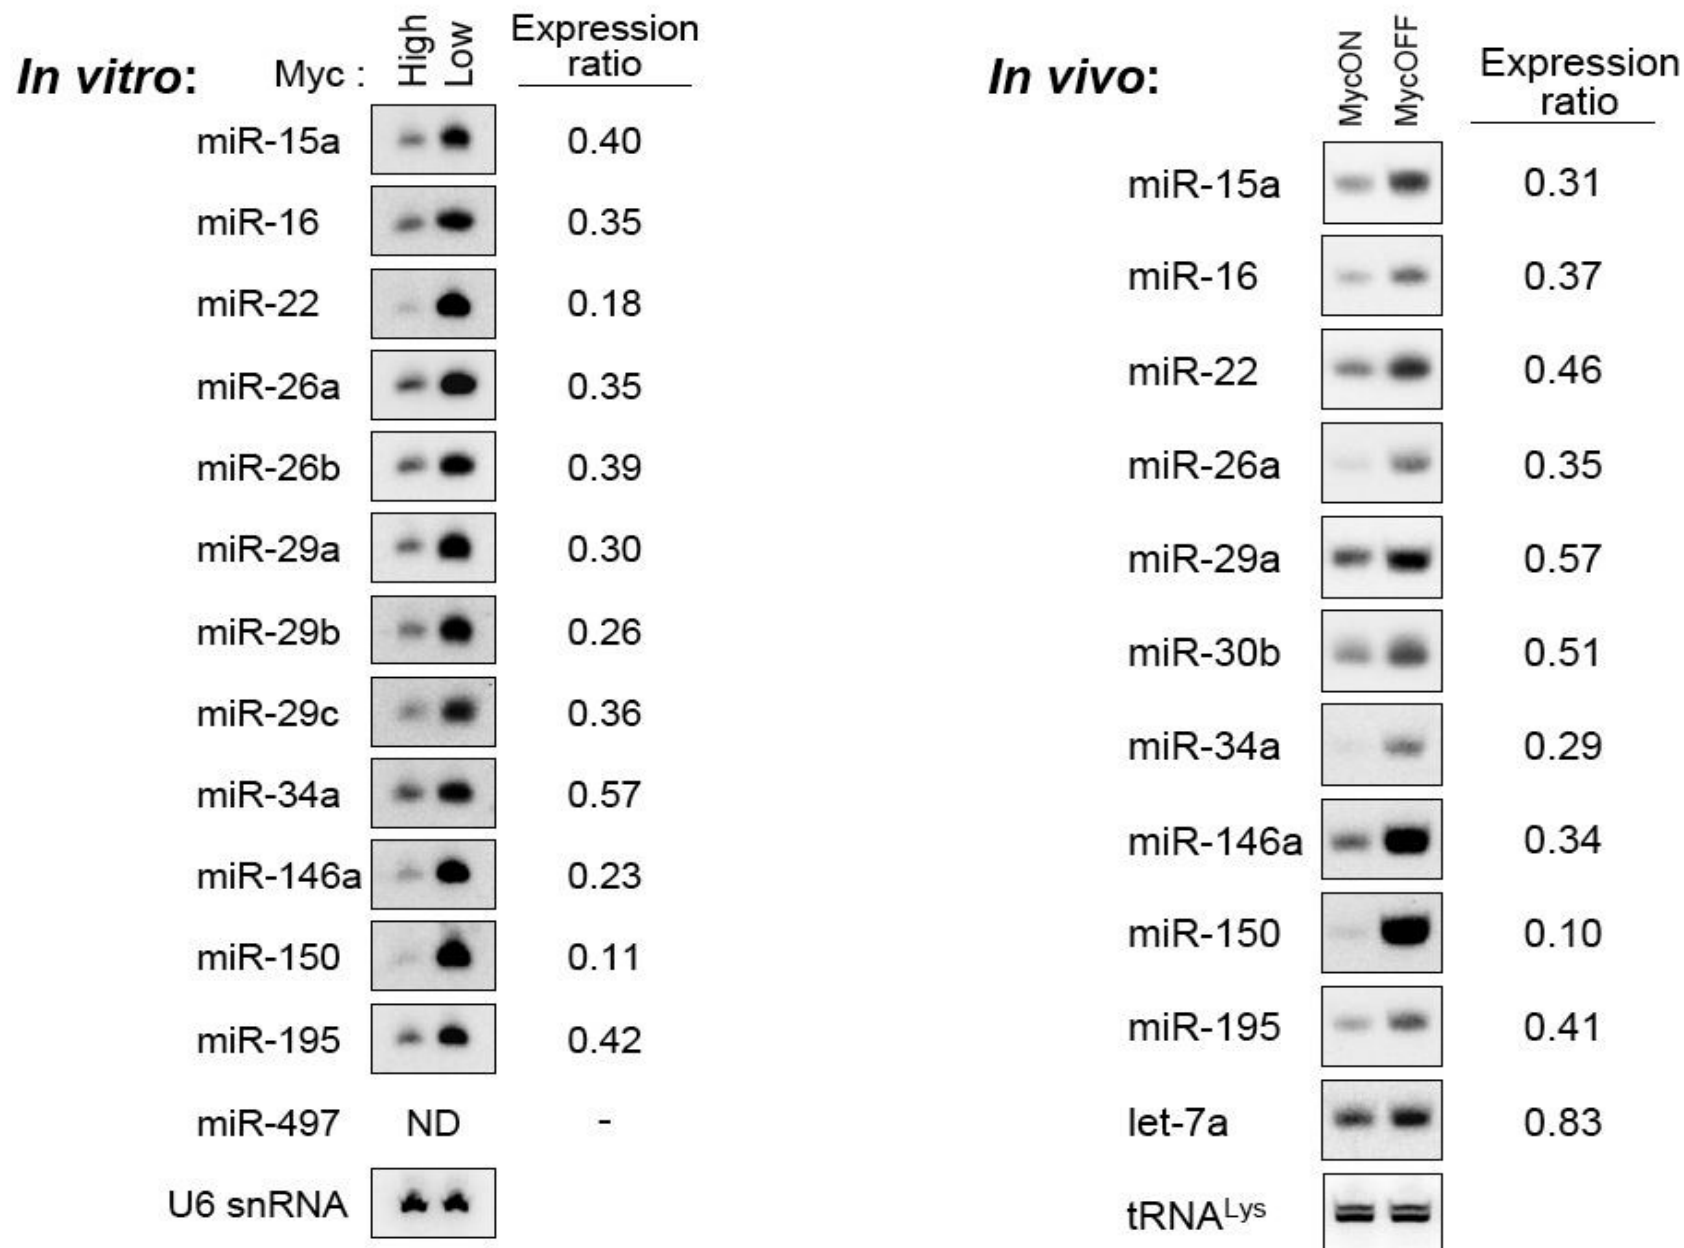

Zhang et al Dev Biol. 2007 Feb 1;302(1):1-12

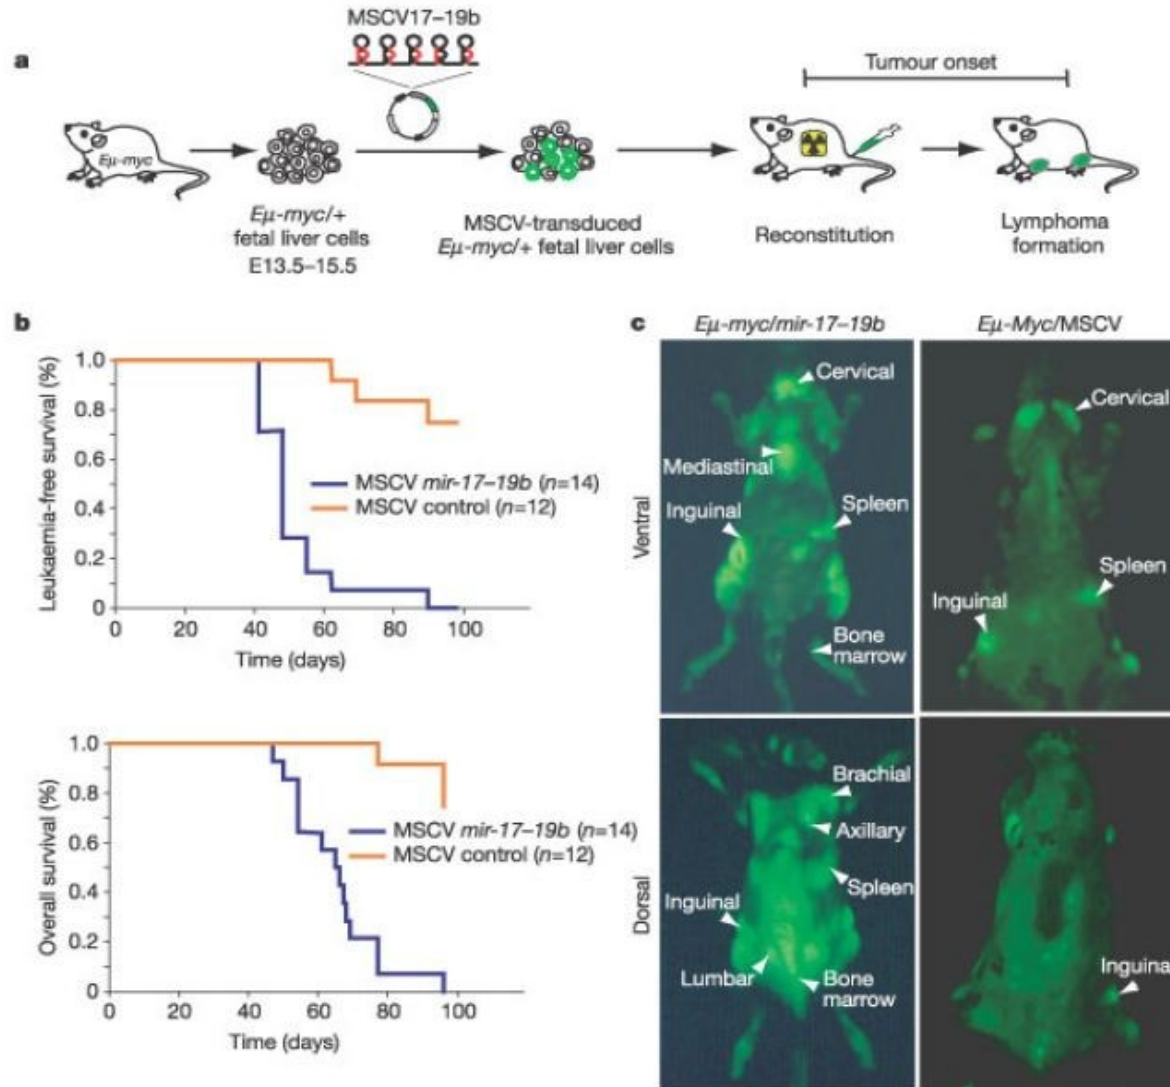

The miR-17-92 cluster is activated by Myc

Myc represses the expression of many miRNAs

The miR-17-92 cluster accelerates Myc-induced lymphomagenesis

MIRNA PROFILING AS A NEW DIAGNOSTIC & PROGNOSTIC TOOL FOR CANCER PATIENTS

**miRNAs expression
signatures associated
with diagnosis and
prognostic factors
(CLL, DLBCL, Lung,
Colon, Pancreas,
Brain ca.)**

(Michael et al, Molec Cancer Res 2003; Lu et al, Nature, 2005; Eis et al, PNAS, 2005
Lui et al, Cancer Res 2007, Bloomston et al, JAMA 2007; Mi et al, PNAS, 2007; Garzon et al, Blood in press 2008)

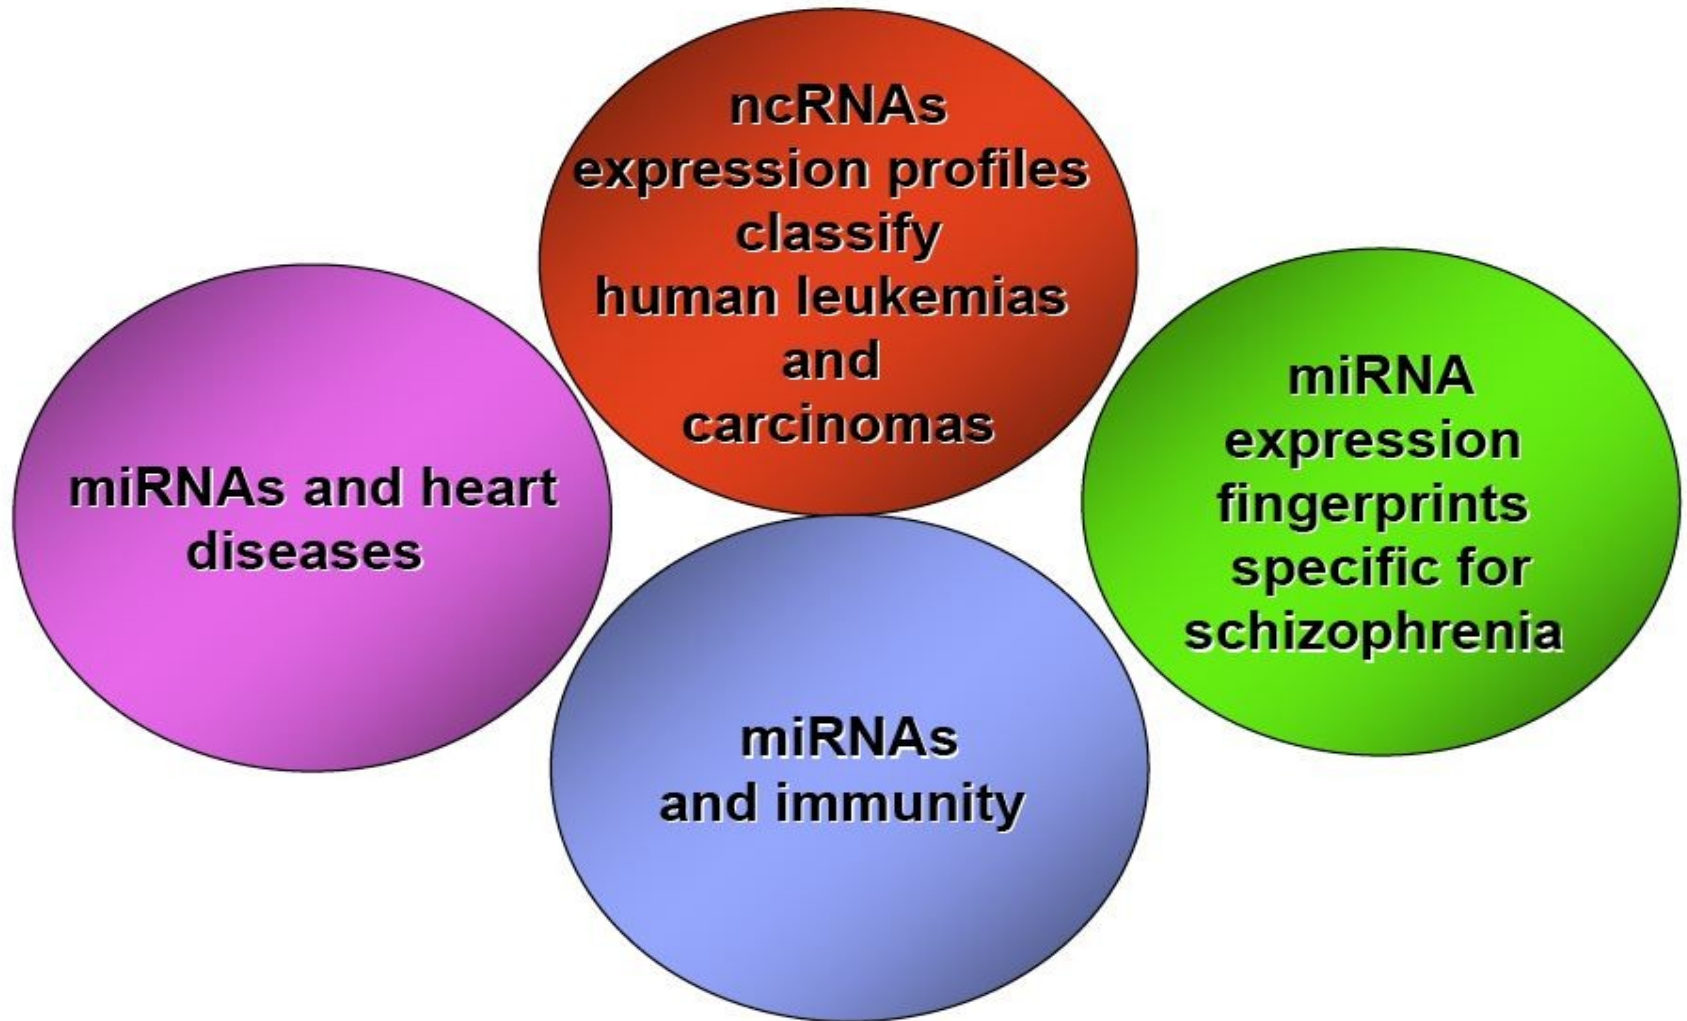

Profiling miRNA expression using custom microarrays

miRNAs and Cancer – A Summary

- miRNAs control cell cycle, cell differentiation and apoptosis by regulating oncogenes and tumor suppressor genes
- •miRNAs are misexpressed in cancer and are therefore excellent diagnostic / prognostic markers in cancer
- •Some miRNAs e.g. *mir-155*, can cause cancer and oncogenic miRNAs may be therapeutic targets in cancer
- •Other miRNAs like *let-7*, may prevent cancer and may be therapeutic molecules themselves.
- •MicroRNAs could augment current cancer therapies.

ALTERATIONS OF NONCODING RNAS ARE FOUND IN EVERY TYPE OF HUMAN DISEASE

(Calin et al, PNAS 2002; Lu et al, Nature, 2005; Landgraf et al, Cell 2007; Perkins et al Genome Biol 2007; Hansen et al PLoS ONE, 2007; Beveridge et al, Hum Molec Genet 2008, Baltimore D, Nat Immunol 2008; van Rooij, Trends Genet, 2008)

Oncogenes
RAS; MYC
BCL2; MET

Proliferation
Apoptosis
Invasion
Angiogenesis

Oncogene miRNAs

mir-17-92; mir-155, mir-21

Target mRNA downregulation

Tumor suppressor genes
LATS; RB1; PTEN

Specific effects

c-myc mRNA

MicroRNAs Commonly Associated with Human Cancer

| miRNA | Gene Loci | Cancer association | Function* | References |
|-----------------------------|--------------------|--|-----------|--|
| miR15, miR-16 | chromosome 13q14 | Frequently deleted/downregulated in B-cell chronic lymphocytic leukemia. Negatively regulates the anti-apoptotic gene, BCL2. | TS | Calin, 2002 Cimmino, 2005 |
| miR-143, miR-145 | chromosome 5q3233 | Decreased abundance in colorectal cancer. Down-regulated in breast, prostate, cervical, and lymphoid cancer celllines. miR-145 decreased in breast cancer. | TS | Michael, 2003 Iorio, 2005 |
| miR-21 | chromosome 17q23.2 | Antiapoptotic factor. Upregulated in glioblastomas and breast cancer. | OG | Chan, 2005 Ciafre, 2005 Iorio, 2005 |
| <i>let-7</i> | multiple loci | Negatively regulates the Ras oncogene. Directs cell proliferation, differentiation. Decreased abundance in lung cancer. | TS | Johnson, 2005 Takamizawa, 2004 |
| miR-142 | chromosome 17q22 | t(8,17) translocation that places the MYC oncogene downstream of the <i>mir-142</i> hairpin resulting in an aggressive B cell leukemia due to MYC over-expression. | N/A | Lagos-Quintana, 2002 |
| BIC/miR-155 | chromosome 21q21 | Upregulated in pediatric Burkitt's lymphomas, Hodgkins, primary mediastinal and diffuse large B cell lymphomas. Upregulated in human breast cancer. | OG | Eis, 2005 Kluiver, 2005 van den Berg, 2003 Metzler, 2003 Iorio, 2005 |
| miR-17-19b cluster | chromosome 13q3132 | Upregulated by the c-Myc oncogene Negatively modulates E2F1 oncogene. Loss-of-heterozygosity of cluster in hepatocellular carcinoma. Over-expressed in Bcell lymphomas. | TS/ OG | He, 2005 O'Donnell, 2005 |

*Abbreviations: TS, tumor-suppressor gene; OG oncogene; N/A, not applicable
